

Introduction

At Eurapipe, our aim is to provide a total preinsulated piping system with the emphasis on "total".

Eurapipe, through its 25 year experience and ongoing leadership in materials technology and product development, has repeatedly proven the reliability, repeatability and robustness of its ABS socket/spigot jointing system, even in the most arduous of conditions.

Eurapipe's proven track record, over many millions of joints, many of which have been in carrier pipe diameters up to 800mm, delivers unique benefits to a preinsulated piping system.

Unlike many other preinsulated piping systems, the Eurapipe K-FLO ABS preinsulated piping system has the following clear advantages:

- ✓ a long life system that is destined to far outlast traditional systems
- ✓ an absolutely secure, **TOTALLY** preinsulated system.

The entire effective length of all pipes and fittings are supplied to the field completely preinsulated in our factory.

Gone forever is the risky, costly, time consuming need to field insulate and protect pipe joint gaps in preinsulated piping systems joined by traditional methods.

Eurapipe K-FLO is a truly TOTAL preinsulated piping system.
