

# The Company

Eurapipe is part of the Tyco Water division of Tyco Flow Control Pacific. TFCP is incorporated in Australia and has its head office in Nowra, New South Wales.

Tyco Water, through its predecessors, has been associated with infrastructure pipelines since the late 1800's. Tyco Water offers products for all water industry applications – potable water systems, industrial water systems, chilled water systems, sewage rising mains and trunk sewers.

Additionally, Tyco Water's experience and expertise covers a wide range of services to the water industry, primarily in supply, design, construction and training.

Tyco Water is a world leader in the development and implementation of corrosion proof, secure, long life pipeline systems.

The Eurapipe division of Tyco Water specialises in the thermoplastic range of piping systems and material types included in its manufactured range are:

- ✓ uPVC
- ✓ mPVC
- ✓ Acrylonitrile Butadiene Styrene (ABS )
- ✓ Polyethylene (HDPE)
- ✓ Polypropylene (PP)
- ✓ Plastic lined steel systems

Even though plastic pipes have been used in the construction industry for only a few decades and their appearance has hardly changed since they were first introduced, the quality of the material physical properties has improved so much that plastic pipes have become indispensable.

Eurapipe is the world leader in innovation and development of ABS piping systems. We continually develop solutions to technically sophisticated problems in demanding markets. We draw on expertise in material science technologies, product design and process engineering to provide optimum solutions to Engineers, Contractors, End Users and Owners.

Eurapipe has been extending its size range and application capability for nearly 30 years:

- 1975 ABS pressure pipe systems commercialised in size range 50mm to 200mm
- 1982 System size range extended to 400mm
- 1988 System size range extended to 630mm
- 1997 System size range extended to 800mm

Leadership is more than a position, it is a state of mind. By constantly striving to supply better and better solutions to water distribution stakeholders, Eurapipe has moved to the forefront in innovation leadership.
