

ABU DHABI PIPELINE

The manufacture and supply of more than 13,000 SINTAKOTE steel water pipes is underway, destined for the United Arab Emirates. These pipes and fittings will become the key component of a project to transport desalinated water from the capital, Abu Dhabi, to the eastern regions of the country.

Over 2600 shipping containers will be involved in transporting the

pipes from Tyco Water's manufacturing facilities in Perth and Brisbane, Australia. The high pressure rating possible with the SINTAJOINT pipeline system meant that the testing 42.5 Bar operating pressure was not a problem. Neither was the speed of construction required, with the rubber ring joint and 12m long pipe lengths enabling very rapid installation.
