

## AHEAD OF SCHEDULE AT SPRING FARM

Tyco Water has completed the first delivery of pipes for the Narellan South Reservoir Outlet with eight 1085OD seal coated SINTAKOTE® pipes arriving on site at Spring Farm in December. The delivery will be the first of many required for the construction of a new trunk main that will supply part of the burgeoning South Western Sydney region with potable water.

Tyco Water, as the pipeline supplier was required to deliver the first load of pipe to site for work to commence before 2011. Tyco's manufacturing facility at Currumbin worked tirelessly to meet the order and successfully had the pipes dispatched to arrive ahead of time.

The pipes were manufactured and delivered within the required timeframe which demonstrates the value of using an Australian manufacturer. Tyco Water's manufacturing operations have been based in Australia for over one hundred years and the benefits are clear with the ability to customise output and eliminate lengthy international freight times.

By the end of the project Tyco Water will deliver over 200 six metre lengths of 1085OD SINTAKOTE pipes to Spring Farm for the construction of this vital pipeline.
