

GOLD COAST PUMPS AND PIPES PROJECT

Due to the rapid growth on the Gold Coast, Gold Coast Water needed a different approach to their need for new water mains across the city to ensure that they could continue to provide for the increasing demand and maintain a desirable standard of service to the community. To this end Gold Coast Water engaged Abigroup as the managing contractor and Sinclair Knight Merz as the designer, with strict targets to meet.

This is where Tyco Water stepped in, as Abigroup knew they needed a reliable supplier who would be able to meet their requirements and supply their entire pipe and fittings needs and after a rigorous tendering process Tyco Water was selected as the sole supplier for the project.

As sole supplier, Tyco Water was able to commit to production of the pipe and fittings requirements for each of the sub-projects before they were awarded to the successful sub contractor and even though construction did not start till October 2004, the team has been able meet the targets set for this financial year.

Tyco Water is supplying its full range of pipelines systems to the project from Ductile Iron TYTON 2100 Series, to SINTAKOTE Steel and Tuf-flo mPVC Plastic.
