

GOLDFIELDS SUPERPIPE LINK BENDIGO TO BALLARAT

The \$180 million Ballarat link of the Goldfields SUPERPIPE, will provide Ballarat with an extra 10,000 megalitres of water each year. The pipeline, from Bendigo's Sandhurst Reservoir to Ballarat's White Swan Reservoir, will effectively secure Ballarat's water supply for the next 50 years.

Tyco Water has recently completed supply to the 89.5km Ballarat link of the Goldfields SUPERPIPE. Supplying 47km of SINTAKOTE steel pipe and fittings and 42km of Ductile Iron pipe and fittings, Tyco Water called on the dedicated services of its SINTAKOTE

Steel Pipeline Systems Somerton manufacturing facility, Ductile Iron Pipeline Systems Yennora manufacturing facility and Ductile Iron fittings Currumbin manufacturing facility, to supply all materials. A sustained effort from all manufacturing facilities enabled Tyco Water to provide most of the 800mm pipe, fittings and 56 valves prior to the January 2008 supply deadline.

This was a significant achievement for Tyco Water and it essentially leaves Tyco Water's SINTAKOTE Steel Pipeline Systems Somerton manufacturing facility with the increased capacity to satisfy future demands. Tyco Water is continuing to expand its Australian manufacturing capabilities and this ensures the future of Australia's water industry remains in good hands.
