

SEQ Water Grid Project

Tyco Water, headquartered in Nowra, and a division of Tyco International Ltd. (NYSE: TYC; BXS: TYC), announced today that it had received the second multi-million dollar order to support the SEQ water grid project. The Queensland Government is installing a network of water pipelines, connecting all the major water sources in the region, including a 125 million litre per day desalination plant (under construction on the Gold Coast). In addition they are constructing a 200km long pipeline taking 210 million litres per day of treated wastewater to major power stations and industry in the region.

"We have just received our second order for SINTAKOTE pipes and fittings for the SEQ Water Grid and at \$140M it is by far the biggest single order the company has seen" said Col Lewis, Manager Marketing & Project, Tyco Water.

A majority of Australia is currently in the grip of the worst drought in over 100 years. Even the capital cities such as Sydney, Melbourne and Brisbane have had to impose strict restrictions on water use to conserve their dwindling supplies. The Queensland State Government has embarked on a bold plan, called the SEQ Water Grid, to protect the densely populated south-east corner of the state from running out of water.

"We believe we have been successful because the SINTAKOTE pipeline system has an unrivalled reputation for performance," said Lewis. "Tyco Water has a track record of living up to our delivery promises. For these reasons we are hopeful of securing more orders for the SEQ Water Grid."

The SINTAKOTE steel pipeline system is considered to be one of the world's best water supply pipeline systems. This steel pipeline system can currently be supplied in sizes up to 1.8m diameter and features a thick protective coating of polyethylene, a long lasting lining of cement mortar and the patented rubber ring joint system called SINTAJOINT.

Tyco Water has a long history of satisfying the needs of the water Industry in Australia. Under various owners, the company traces its history from the Kalgoorlie pipeline that was installed using the innovative locking bar pipe in 1898. In 2006 it consists of a number of Water focused business units with a multi dimensional offering of Products, Services, Systems and Solutions. Product offerings are categorized by pipeline systems in Ductile Iron, Steel, PVC, ABS, and PE and fittings and appurtenances such as Valves, couplings, clamps. Service offerings include, nationwide customer centres, pipelines research and technology, pipeline renovation and repair, as well as under pressure tapping and line stopping.

Tyco Water employs over 1100 people at their 23 manufacturing facilities and distribution Outlets and are committed to satisfying, in an environmentally sustainable manner, all its stakeholders, including its customers, its employees and its shareholders.

Tyco International Ltd. is a global, diversified company that provides vital products and services to customers in five business segments: Fire & Security, Electronics, Healthcare, and Engineered Products & Services. With 2006 revenue of \$41 billion, Tyco employs 250,000 people worldwide.
